

## 'A PROTOCOL FOR FUTURE FIELDRECORDING ARCHIVISTS'

- Determine the main objective of your archive, what will be interpreted and how can it be interpreted?
- Make sure this information is clearly explained and highly visible to anyone using the archive
- Leave mental space for adaptation, your archive may change because its objective seems to shift overtime
- Listen to the past, but envision a future
- Don't keep anything private, don't keep secrets
- Seek interaction with your listeners, preferably in a playful manner
- Remember, you are part of a community, ask for help or advice when needed
- Seek sustainability, digital archiving is preferred, but stay with the times and beware of technical errors
- Check your archive biweekly for said technical errors
- Pursue a collecting, but don't be fooled by eternity, imagine the non-existing
- When you come to die, gift someone your archive with the task of maintaining it, keeping it alive and expanding it is most desirable
- Acknowledge your archive as an artistic sound installation, allow yourself creative and imaginative freedom

Lastly, consider your archive a living organism, foster the process of its birth, don't rush its existence, give it breathing room to expand and feed it with nutritious meals, don't let it stall or let it become an addition to the *dead collection of sounding objects* we already so abundantly inherited.
